17. ABSTRACT (MAX. 250 WORDS)

The sixth annual report by the Office of Education on higher education tuition and fees, room charges, and board charges. Data were furnished by college registrars and admissions officers. The appendix lists individual institutional fees for 1,895 responding colleges and universities who gave approval for the listing of data from their institution.

Highlights

Responses: The response rate for the 1962-63 report on basic student charges was approximately 92 percent for both publicly and privately controlled institutions of the aggregate United States.

Tuition and fees: The median charge for full-time undergraduate tuition and fees for the academic year was $170 for resident students at public institutions, with a range from $20 at the 10th percentile to $295 at the 90th percentile; for nonresident students it was $451, with a range from $205 to $675. For undergraduates at private institutions the median charge was $690, with a range from $290 to $1, 245.

The median charge for full-time graduate tuition and fees for the academic year was $226 for resident students at public institutions, with a range from $90 at the 10th percentile to $423 at the 90th percentile; for nonresident students it was $468, with a range from $259 to $766. For graduate students at private institutions the median charge was $900, with a range from $531 to $1,428.

Room: The median room charge at public colleges and universities was slightly higher (2.5 percent) for women than for men ($204 v. $199). At private institutions the median charge to women was 6.3 percent higher than the median charge to men ($238 v. $224).

Board: In public institutions the median board charge to men was 2 percent higher than the median board charge to women ($389 v. $381); in private institutions women were charged 4.5 percent more than were men ($436 v. $417).

Foreword

This is the sixth annual report by the Office of Education on higher education tuition and fees, room charges, and board charges. The first year's publication was developed in response to a request from the National Federation of College and University Business Officers Associations for data useful in budget-making and other planning activities.

Formerly, the report was presented as "Higher Education Planning and Management Data" and included salary and other data. Since last year, however, student charges have been reported in a separate volume entitled "Basic Student Charges." (Higher Education Salaries, 1962-63, the companion volume to this year's report on student charges, is in process of publication.) The schedules forwarding information for the current report were completed by the college registrars and admissions officers rather than by the business managers, who completed the schedules for previous reports. An appendix carries a listing of individual institutional fees for those institutions which gave their approval; of 1,895 responding colleges and universities, about 80 percent approved the listing.

The responsibility for planning and conducting this report belongs to Dr. W. Robert Bokelman, Chief, Business Administration Section, and Dr. Louis A. D'Amico, Specialist, Business Administration Section. Research and copy preparation were performed by Estelle B. Aubrey, Anna Jane Holbrook, Alice R. Pool, Maenylie M. Reed, M. Louise Stewart, Lucille L. Wellman, and Linda L. Wright.

Chapter 1

Collection and Analysis of Data

Since 1957 the U.S. Office of Education has collected and disseminated data on the charges which institutions made to undergraduate full-time students for tuition and other required fees and the charges to students for room and board accommodations, as well as data on higher education salaries and new buildings completed. These data, comprising the Higher Education Planning and Management Data survey, were collected by one comprehensive questionnaire schedule from college and university business officials. This year the survey form was divided into two parts: Part I, dealing with salary and new buildings completed, was mailed out to business officials in mid-June 1962; Part II, dealing with basic student charges, was mailed out to registrars and admissions officials in late September. Because the basic student charges were expanded to include the tuition and other required fees charged students in graduate and first-professional-degree programs, as well as the charges to students in undergraduate programs, and because the survey included information on the number of full-time students in each of the different types of programs offered by an institution, it was felt that the registrar or admissions officer of an institution would be in a better position to provide the more detailed information on basic student charges. This decision was supported by the research committee of the American Association of Collegiate Registrars and Admissions Officers.

To facilitate and expedite the collection and processing of data, the 1962-63 basic student charges data were collected on self-addressed keysort cards. A total of 2,056 institutions were included in the survey population. Responses from over 92 percent of the institutions (see table 1 for details on analysis of responses) were received. An indication of the flow of responses is revealed by the following: the first response was received on September 25, 1962, and the last on March 7, 1963; approximately 70 percent of the responses were received by November 1 and 93 percent by December 1; the remaining 7 percent were received after December 1. Postal card reminders were mailed out to nonrespondents on the fourth and seventh weeks after the initial mailing of the forms. Every effort was made to check the reliability of the data received; the data contained in each response were checked against data in previous institutional responses and in institutional catalogs, and, in certain cases, letters and copies of the keysort form were sent to institutions for clarification.

Presentation of data

This year's report differs from reports of previous years in that it presents charges corresponding to the 10th, 25th, 50th, 75th, and 90th percentile points instead of average charges. The use of keysort cards gave a maneuverability that made it possible to obtain frequency distributions and to derive measures of variability--the 10th, 25th, 50th, 75th, and 90th percentile points--for each item in the basic student charges. Thus, this year's report presents a measure of central tendency--the median, or 50th percentile--and measurements of the extent to which charges of various amounts are dispersed. These five percentile points were computed for tuition and other required fees and for room and board charges for undergraduate, graduate, and first-professional-degree programs. 1/

1/ The frequency distribution tables from which these percentile points were computed are too voluminous to be included with the report. However, readers desiring copies of the distribution tables can obtain them by writing to the authors.

Because the manner of presentation this year differs from that of previous years, the reader is cautioned about the comparability of the measure of central tendency used this year (the median, or 50th percentile) with that of previous years (the average, or arithmetic mean). Whereas the median of a distribution is the point below or above which one-half of the values lie, the average, or arithmetic mean, is the sum of the values in a category divided by the number of items in the category. An advantage of the median as a representative figure is that it is less affected by extreme values. Where the frequency distribution tends, as in this report, to be skewed toward the higher values (i.e., the highest charges tend to be farther from the median than the lowest charges are), the mean is usually somewhat higher than the median. The median may be thought of as the midpoint of a distribution--the 50th percentile. The 25th percentile, or first quartile, is the point in a distribution below which 25 percent, or one-fourth, of the values lie; the 75th percentile, or third quartile, is the point in a distribution below which 75 percent, or three-fourths, of the values lie; similarly, the 10th and 90th percentiles are the points in a distribution below which lie 10 and 90 percent of the values, respectively.

This report presents data on tuition charges and other required fees for full-time students in undergraduate, graduate, and first-professional-degree programs, and on charges to men and women students for institutional room and board accommodations. The variation in charges is shown by institutional type and control, and, in some cases, by regional location.[2/] Also presented in this report is a listing of the institutions which responded to the 1962-63 survey, by control, type, and regional location, showing the undergraduate tuition and required fees, as well as room and board charges. These data are shown only for the institutions which gave permission to publish their 1962-63 charges (see appendix A for the public and appendix B for the private respondent institutions).

2/ Regional divisions are as follows: *North Atlantic:* Connecticut, Delaware, District of Columbia, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, Vermont; *Great Lakes and Plains:* Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, Wisconsin; *Southeast:* Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, Virginia, West Virginia; and *West and Southwest:* Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, Oklahoma, Oregon, Texas, Utah, Washington, Wyoming.

Types of institutions

For purposes of statistical analysis, institutions of higher education are often classified into nine major curricular-organizational types within two groups, according to the length of programs: (1) Institutions whose programs involve at least 4 years of work beyond high school (universities, liberal arts colleges, independently organized teachers colleges, independently organized technological schools, independently organized theological and religious schools, and other independently organized professional schools); and (2) those having programs of less than 4 years (junior colleges, engineering-related technical institutes, and non-engineering-related semiprofessional institutes). Although data for each of the six types in the first group are shown separately in the tables, the data for the three types in the latter group have been combined here under the term "junior colleges." These seven headings are defined below:

Universities--institutions which stress graduate instruction and research, confer advanced degrees in a variety of liberal arts fields, and have at least two professional schools that are not exclusively technological.

Liberal arts colleges--institutions in which the principal emphasis is placed on a program of general undergraduate education.

Teachers colleges--independently organized institutions devoted primarily to teacher training and offering programs of at least 4 years; their programs may resemble somewhat those of liberal arts colleges or the undergraduate teacher-training curriculums of universities.

Technological schools--independently organized institutions in which training is predominantly in technological physical science disciplines, including institutions which emphasize graduate training and research.

Theological and religious schools--independently organized professional schools offering programs wholly or principally in theology, religion, or religious education.

Other professional institutions--other independently organized institutions offering programs directed to one or more fields of specialization, such as medicine, law, or fine arts.

Junior colleges--in this report, a category comprising all higher education institutions (including technical institutes and semiprofessional schools) offering at least 2 but less than 4 years of work beyond the 12th grade. This group is sometimes termed "2-year institutions."

Responses

The response rate for the 1962-63 survey of basic student charges at publicly and privately controlled institutions in the aggregate United States (i.e., including outlying parts) was about 92 percent, as shown in table 1. The response rate for public institutions ranged from 88 percent of the junior colleges to 100 percent of the universities; for private institutions it ranged from 84 percent of the "other professional" schools to about 95 percent of the universities. Regionally, the response rate for public institutions ranged from 88 percent for those in the Great Lakes and Plains to 94 percent for those in the North Atlantic; for private institutions, it ranged from 90 percent for those in the Southeast to 94 percent for those in the North Atlantic and the Great Lakes and Plains. With rare exception was the response rate in any of the cells under 80 percent. For public institutions, liberal arts colleges in the Great Lakes and Plains had a response rate of 77 percent; the one "other professional" school in the West and Southwest did not respond and therefore had a zero response rate. For private institutions, teachers colleges in the Southeast and technological schools in the Southeast and in the West and Southwest showed response rates of under 80 percent.

Chapter 2

Tuition and Required Fees

The colleges and universities were asked to furnish information on charges to the typical student for the 1962-63 academic year of two semesters or three quarters: undergraduates, graduates, and students in first-professional-degree programs. From these data, percentile points were computed (including the 10th, 25th, 50th, 75th, and 90th) by type of institution.

Undergraduate charges

Public institutions--resident[1/]. --The variation in charges made to full-time undergraduate resident students by public institutions in 1962-63 is shown in table 2. For the 685 public institutions which reported data, the charges to resident students varied from $20 at the 10th percentile to $295 at the 90th percentile. The median charge to resident students was $170. By institutional type, the two highest charges were in "other professional" schools and universities at three of the percentile points and in "other professional" and technological schools at two percentile points; the lowest charges were in junior colleges at each percentile point.

By region, the public institutions in the North Atlantic showed the highest charges at each of the percentile points ($107 at the 10th percentile to $419 at the 90th percentile) and those in the West and Southwest the lowest (no charge at the 10th percentile to $252 at the 90th percentile).

Public institutions--nonresident[2/]. --As can be seen in table 3, only 520 of the reporting 685 public institutions gave tuition charges and required fees for nonresident undergraduate students. (Institutions not reporting tuition and required fee data for out-of-State undergraduates comprised 4 of 92 universities, 5 of 83 liberal arts colleges, 52 of 156 teachers colleges, 4 of 19 technological schools, 1 of 16 "other professional" schools, and 99 of 319 junior colleges.) It may be assumed, especially in the case of junior colleges, that many of these institutions did not report nonresident fees because they did not cater to out-of-State students or because they had no established policy which differentiated between State and out-of-State students. Whatever the reason, 165 respondents (24 percent) did not report out-of-State data.

For the approximately 3 out of 4 responding institutions which reported out-of-State tuition and fee charges, the range in charges was from $205 at the 10th percentile to $675 at the 90th percentile. Compared to the median charge for State residents ($170), the median out-of-State charge of public institutions ($451) was $281 higher. At each of the five percentile points, "other professional" schools and universities ranked first and second in size of out-of-State charges, the charges ranging from $493 and $455, respectively, at the 10th percentile to $1,049 and $830 at the 90th percentile. With the exception of charges of teachers colleges at the 90th percentile ($584), the charges of junior colleges were the lowest for any of the institutional types, ranging from $176 at the 10th percentile to $426 at the 75th percentile and $589 at the 90th percentile.

Variations in charges to out-of-State students show the North Atlantic institutions with the highest charges at the five percentile points ($381 at the 10th and $706 at the 90th). Institutions located in the Great Lakes and Plains had the lowest charges ($174 at the 10th and $664 at the 90th), except for the West and Southwest at the 75th percentile, $473.

1/ Category covering students who are legal residents of the State.

2/ Category covering students who are not legal residents of the State.

Private institutions.--Table 4 shows that for the 1,210 private institutions the 1962-63 undergraduate charges varied from $290 at the 10th percentile to $1,245 at the 90th percentile. The median charge was $690. Universities had the highest charges at the 10th, 25th, and 75th percentiles, and technological schools had the highest charges at the 50th and 90th percentiles. With the exception of the 10th percentile point, where technological schools had the lowest charge ($40) of any of the private institutional types, theological schools had the lowest charges (varying from $213 at the 25th percentile to $696 at the 90th percentile). By region, institutions in the North Atlantic had the highest charges ($645 at the 25th percentile and $1,471 at the 90th percentile) except for the 10th percentile, for which the West and Southwest had the highest charge, $318; those located in the Southeast had the lowest charges ($389 at the 25th percentile and $831 at the 90th percentile) except for the 10th percentile, for which the Great Lakes and Plains had the lowest charge, $273.

Comparisons.--Based on the data in tables 2-4, a graph has been made of the median tuition and required fees charged full-time undergraduates by public and private institutions in 1962-63. (See figure 1.) Overall, the median charge of private institutions was roughly 4 times as large ($690 v. $170) as the median charge of public institutions to resident undergraduates and 1.5 times as large ($690 v. $451) as the median charge of public institutions to out-of-State undergraduates. For the various types of institutions, the extent to which median charges of private institutions were larger than median charges of public institutions to resident undergraduates varied from 1.7 times as large for "other professional" schools ($794 v. $475) to 4.5 times as large for liberal arts colleges ($751 v. $168). The extent to which median charges in private institutions were larger than median charges to nonresident undergraduates in public institutions ranged from 1.1 times as large ($794 v. $706) in "other professional" schools to 2.1 times as large ($1,050 v. $506) in technological schools. An examination of figure 1 reveals that the median nonresident charges of public universities ($609) and "other professional" schools ($706) were larger than the median charges of private teachers colleges ($575), private junior colleges ($502), and theological schools ($361).

Graduate charges

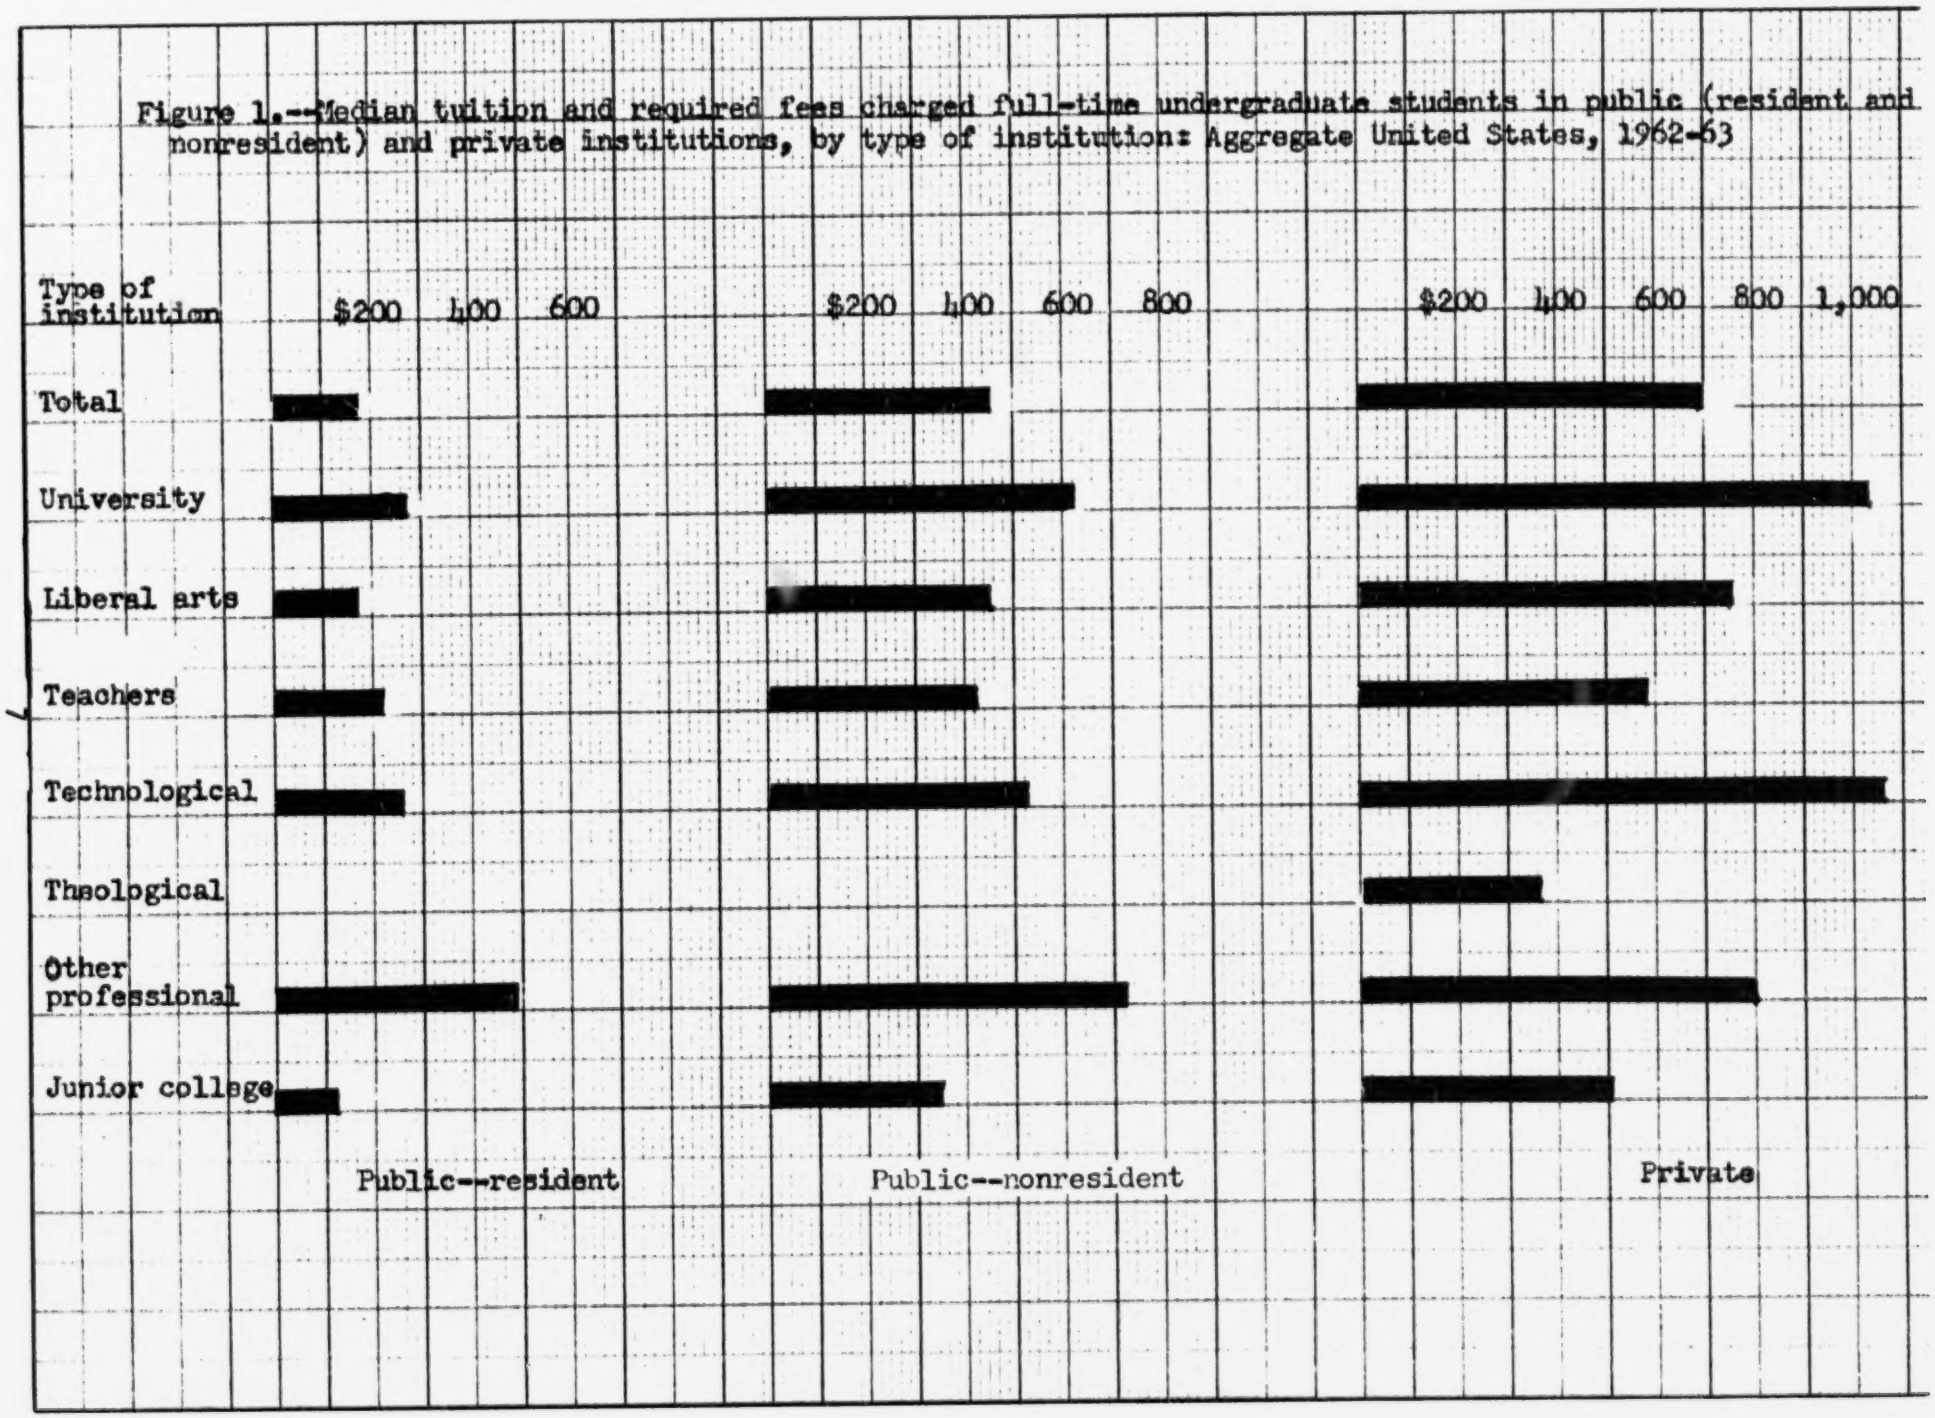
Respondents to the basic student charges survey were requested for the first time to provide data on the tuition and required fees charged students in graduate programs. Although the bulk of graduate students are in universities, distributions were also made of the charges made for graduate programs in liberal arts colleges and in other types of institutions (including teachers colleges, technological schools, theological schools, and "other professional" schools) which reported data in the graduate category.

Table 5 shows that the median institutional charges to full-time graduate students were $226 and $468 in public (resident and nonresident students) and $900 in private institutions. The difference in charges between the 10th and 90th percentiles was $333 for resident students in public institutions, $507 for nonresident students in public institutions, and $897 for students in private institutions. The median graduate charges by private institutions were as follows: universities--$930; liberal arts colleges--$855; and "other" types--$967. These median charges were larger than the corresponding resident charges of public institutions by 268 percent, 418 percent, and 341 percent, respectively. Compared to the median nonresident charges of public universities, liberal arts colleges, and "other" types, the median charges of private institutions were larger by 65 percent, 84 percent, and 157 percent, respectively.

Charges in first-professional-degree programs

Table 6 presents the variations in institutional charges to students in first-professional-degree programs. Although information was requested on charges in other first-professional-degree programs besides agriculture, dentistry, education, engineering, law, medicine, and pharmacy, respondents did not report data on other programs at a sufficiently high frequency to show them here with any assurance of reliability. The variations in tuition and required fees charged students in first-professional-degree programs are shown for public (resident and nonresident) and private universities and liberal arts colleges, both separately and combined.

Figure 1.--Median tuition and required fees charged full-time undergraduate students in public (resident and nonresident) and private institutions, by type of institution: Aggregate United States, 1962-63



The range of charges in 1962-63 for 403 public first-professional-degree schools was from $152 at the 10th percentile to $567 at the 90th percentile for resident students and from $388 at the 10th percentile to $911 at the 90th percentile for nonresident students. For the 369 private first-professional-degree schools, the range of charges to students was from $492 at the 10th percentile to $1,407 at the 90th percentile. The median charge by private institutions was $833, $239 higher than the median charge of public institutions to nonresidents and $565 higher than the median charge of public institutions to residents. A comparison of the median charges of total first professional schools showed that for all three categories--public resident, public nonresident, and private--medical and dental schools ranked as the two highest in charges, with medicine usually higher than dentistry. In public institutions median charges in schools of agriculture were generally the lowest for both resident and nonresident categories, while schools of education generally ranked next to lowest. In private institutions median charges in schools of education were lowest except for the 90th percentile.

By institutional type, almost 84 percent of the first professional schools in public institutions and 50 percent of those in private institutions were reported by universities. For each of the three categories--public resident, public nonresident, and private--the median charges at schools in universities were $121, $153, and $320 higher, respectively, than the corresponding medians at professional schools operated by liberal arts colleges. As can be seen in table 6, no medical or dental school data appear in the liberal arts college category. Too, of the first-professional-degree data reported by 183 private liberal arts colleges, approximately 75 percent are data for students in education programs, and of the first-professional-degree data reported by 65 public liberal arts colleges, a little less than half were for education programs.

In universities the median charge in private first-professional-degree programs was $1,033, or 64 percent higher than the median charge of public universities to nonresident students, and 264 percent higher than the median charge of public universities to resident students.

Median charges for total schools of medicine were higher than the charges of other first professional schools by the following percentages: from 2 percent (dentistry) to 128 percent (agriculture) for public residents; from 4 percent (dentistry) to 66 percent (agriculture) for public nonresidents; and from 18 percent (dentistry) to 82 percent (education) for students in private institutions.

Table 2.--Percentile values of tuition and required fees charged full-time undergraduate resident students in public institutions for the academic year, by type of institution and region: Aggregate United States, 1962-63

1/ Included in the university group are data from: 5 medical, 1 dental, and 2 pharmacy schools for public; and 3 medical, 3 engineering, 14 law, 3 dental, and 3 pharmacy schools for private, which are included in tables 2-4 in the technological and "other professional" school categories.
2/ In cases where the number of institutions reporting is 10 or less, only the medians (50th percentile) are shown.

Chapter 3

Room and Board Rates

It is interesting to note the variations by type of institution in the charges for dormitory rooms and food services. The reported costs of these accommodations are presented by the same five percentile points.

Dormitory room charges

An examination of table 7 shows that charges of 373 public institutions for dormitory rooms to men varied from $137 at the 10th percentile to $293 at the 90th percentile; for women, charges by 375 public institutions varied from $137 to $295. On the other hand, the charges to men reported by 780 private colleges and universities varied from $138 to $357, and the charges to women reported by 830 private institutions varied from $142 to $404 at the 10th and 90th percentiles, respectively. A comparison of the median charges of public institutions shows that charges to women were slightly higher, 2.5 percent ($204 v. $199), than charges to men. For private institutions the median charge to women was 6.3 percent ($238 v. $224) higher than the median charge to men; these charges ($224 to men and $238 to women) were 12.6 and 16.7 percent higher, respectively, than the corresponding charges made to men and women in public institutions.

The range in the median charges to men for dormitory rooms in public institutions varied from $175 (junior colleges) to $250 ("other professional" schools), and for women, from $181 (junior colleges) to $254 (technological schools).

In private colleges and universities the range in median charges for dormitory rooms was from $154 (junior colleges) to $333 (universities) for men, and from $180 (theological schools) to $350 (technological schools) for women.

In public institutions median room charges to men students varied from $177 in the Southeast to $276 in the North Atlantic, and room charges to women students, from $176 in the Southeast to $269 in the North Atlantic. (See table 7.) The Southeast region had the lowest regional charges at each of the five percentile points for both men and women students. The highest charges to men and to women at the several percentile points were equally divided between the North Atlantic region and the Great Lakes and Plains region.

A comparison of median rates charged men with median rates charged women in public institutions reveals that in 3 of the 4 regions (the North Atlantic, the Great Lakes and Plains, and the Southeast) the median charge to men was as much as 3 percent larger than that charged women. In the West and Southwest region, however, the median rate charged women was about 4 percent higher than the median charged men.

As was found for public institutions, the Southeast region showed the lowest room rates charged both men and women by private institutions. The highest charges were made by institutions located in the North Atlantic region. Median charges ranged from $164 in the Southeast to $290 in the North Atlantic for men, and from $178 in the Southeast to $328 in the North Atlantic for women. Regionally, median room charges to women were from 2 (Great Lakes and Plains) to 13 percent (North Atlantic) higher than median charges to men students. With one exception, charges to men in the Southeast, median room charges to men and women in private institutions were higher than corresponding median charges to men and women students in public institutions.

Board charges

Inspection of the data in table 8 shows that the charges for 7-day board for men in public institutions varied from $294 at the 10th percentile to $495 at the 90th percentile and, for women, from $293 at the 10th to $491 at the 90th. The 10th and 90th percentile figures in private institutions were $309 and $524 for men and $317 and $599 for women. In public institutions, the median charge to men ($389) was 2 percent higher than the median charge to women ($381). In private institutions, on the other hand, the median charge to women ($436) was 5 percent higher than the median charge to men ($417). A comparison of the median charges to men and women by control of institution reveals that the median charge to men in private institutions was 7 percent higher ($417 v. $389); the median charge to women in private institutions was 14 percent higher ($436 v. $381).

By institutional type, median board charges for men in public institutions ranged from $361 (liberal arts colleges) to $454 (technological schools) and from $357 (liberal arts colleges) to $501 ("other professional" schools) for women. In private institutions median charges ranged from $363 (theological schools) to $506 ("other professional" schools) for men and from $375 (theological schools) to $496 ("other professional" schools) for women.

The 7-day board rates in public institutions were lowest, for both men and women students, in the Southeast. (See table 8.) For men students, 7-day board rates were highest in the Great Lakes and Plains region (except that the median charges in the Great Lakes and Plains and in the West and Southwest were the same, $427). For women students, 7-day board rates were highest, with the exception of the 25th percentile, in institutions in the Great Lakes and Plains region. Median charges in public institutions ranged from $339 in the Southeast to $427 in both the Great Lakes and Plains and the West and Southwest regions for men students, and from $338 in the Southeast to $426 in the Great Lakes and Plains for women students. Although the median charges for 7-day board were higher for men students than for women students in each of the four regions, the differences in medians were very small.

In private institutions, for both men and women students, 7-day board charges were highest in the North Atlantic. Generally, charges for 7-day board in private institutions were lowest in the Southeast; exceptions were the 90th percentile for men and the 75th and 90th percentiles for women. Median charges varied from $363 in the Southeast to $474 in the North Atlantic for men, and from $394 in the Southeast to $497 in the North Atlantic for women.

In contrast to the charges in public institutions, the median 7-day board charges in private institutions were higher for women students than for men students, from 3 percent in the Great Lakes and Plains region to 11 percent in the West and Southwest.

A comparison of the median charges for 7-day board in public and private institutions shows that for men students public institutions in the Great Lakes and Plains and in the West and Southwest had median charges 2 and 9 percent higher, respectively, than their private counterparts; however, private institutions in the North Atlantic and Southeast had median charges for men 17 and 7 percent higher, respectively, than their public counterparts. On the other hand, for women students, the private institutions in each of the four regions had median charges from 1 percent (Great Lakes and Plains) to 25 percent (North Atlantic) higher than the median charges of public institutions.

Table 7.--Percentile values of dormitory room rates charged men and women students for the academic year, by control, type of institution, and region: Aggregate United States, 1962-63

1/ The names of the institutions that responded to the 1962-63 Higher Education Planning and Management questionnaire appear in this listing. Institutional charges to full-time undergraduate students for tuition and fees, and charges for room and 7-day board accommodations, are included for those institutions which reported such data and gave permission for its publication.

2/ A rate for a period other than that printed here was reported, such as board rates for 5- or 6-day rather than for 7-day.

3/ This item was not pertinent to the institution since it did not provide this service.

4/ Permission to print the institutional figures was not received.

1/ The names of the institutions that responded to the 1962-63 Higher Education Planning and Management questionnaire appear in this listing. Institutional charges to full-time undergraduate students for tuition and fees, and charges for room and 7-day board accommodations, are included for those institutions which reported such data and gave permission for its publication.

2/ A rate for a period other than that printed here was reported, such as board rates for 5- or 6-day rather than for 7-day.

3/ This item was not pertinent to the institution since it did not provide this service.

4/ Permission to print the institutional figures was not received.

APPENDIX C.—Transmittal letter and questionnaire form

DEPARTMENT OF
HEALTH, EDUCATION, AND WELFARE
OFFICE OF EDUCATION
WASHINGTON 25, D. C.

To the Registrar or Admissions Officer:

For the past five years the Office of Education has collected, through college and university business officers, institutional data on tuition and required fees, room and board charges, faculty and administrative salaries, and new buildings completed. The findings have been reported in the Office's annual publication, Higher Education Planning and Management Data.

In preparing the questionnaire form for the 1962-63 survey, the need to expand the tuition section of the tuition, room, and board schedule was recognized. (The room and board rates sections have not been changed.) This expansion has taken the form of requesting the tuition and fees charged typical full-time students enrolled in undergraduate, graduate, and professional programs as well as the number of full-time students paying the charges for each of the identified programs. Heretofore, only the tuition and fees charged the typical full-time undergraduate student was requested.

Since these items of information are normally available to registrars and admissions officers, it was decided to ask the information of them rather than of the business officers. The proposal to request the information from registrars and admissions officers, as well as the proposed content of the form, was studied by the officers of the American Association of Collegiate Registrars and Admissions Officers. We are pleased that they endorse both the form and the source for collecting the information.

The persons in charge of this survey are Dr. W. Robert Bokelman, Chief, College and University Business Administration Section, and Dr. Louis A. D'Amico, Specialist for College Business Management, Division of Higher Education. Contact either of them if you have any questions on the form, or if you need additional copies (please retain the file copy).

Higher Education Planning and Management Data reports have had wide usage by college and university officials, regional and national associations, public and private agencies, and legislative bodies. Your cooperation in furnishing us with tuition and fee charges and room and board rates, along with the number of students for which each figure is applicable, will enable the Office to provide users of this information with normative data helpful in budget making and policy planning. In addition, these data will provide student cost information of value to secondary school counselors in advising college-bound students.

Thank you for your cooperation.

Sincerely yours,

R. Orin Cornett

R. Orin Cornett
Acting Assistant Commissioner
for Higher Education
Division of Higher Education

P.S. Please note that the form to be returned to the Office is self-addressed and requires no postage.

E Will you permit the publication of your institution's tuition, room, and board figures in the 1962-63 Higher Education Planning and Management Data Report? . . . . . ☐ YES ☐ NO

GENERAL INSTRUCTIONS

1. The institutional data requested in Part III are to be used to provide information on basic costs which a student would incur in attending college. For purposes of this report, interest centers on the student who is full-time and taking room and board at the institution. Since numerous students are excluded from consideration the data reported will not be relevant to institutional income. Note that by no means are all student categories covered by this survey; and the purpose of the survey is not to derive institutional income.

2. The information requested should be available from your 1962-63 enrollment records and from your schedules of tuition, fees, room, and board charges.

3. Please report the requested information on the number of full-time students in undergraduate, graduate, and professional schools and the tuition and fee charges to full-time students according to level of program.

4. Publicly controlled institutions are requested to report tuition and fees for both resident (in-State or in-district) and nonresident (out-of-State or out-of-district) students when separate rates are applicable to nonresident students.

5. Please report room rates and board charges separately even though they may be assessed as a combined charge.

DEFINITIONS AND INSTRUCTIONS FOR COMPLETING SPECIFIC ITEMS

ITEM A – LUMP SUM CHARGE: If your institution has a single charge for tuition and required fees, room, and board for undergraduate students, report the charge.

ITEM B – TUITION AND REQUIRED FEES: Report the 1962-63 academic-year charges (2 semesters or 3 quarters) for tuition and required fees to: (a) full-time undergraduate students in arts and sciences; (b) full-time graduate students in arts and sciences; (c) full-time students in first-level professional programs. (Students in professional curricula beyond the first level are not covered in this survey.)

A full-time student is one who is carrying at least 75 percent of a normal student-hour load. By "normal student-hour load" is meant: number of credit-hours required for graduation, divided by the number of semesters or terms normally taken for graduation (exclusive of summer sessions). For graduate students, full-time work is defined as an academic load--in terms of courses or other required activity (such as a thesis)--which is at least 75 percent of that normally recommended for such students. Tuition and fees should be computed on the basis of the average student classified as "full-time".

Report the number of full-time students enrolled in each program in the fall of 1962 to whom these charges would be applicable, whether or not the student receives some form of scholarship or fellowship aid. Count as "resident" students those eligible for resident charges, and as "non-resident" those to whom nonresident charges are applicable. Assume for purposes of this questionnaire that students enrolled in the fall of 1962 will remain for the entire academic year.

ITEM C – ROOM RATES: Report the scheduled charge paid by the typical student sharing a double room in permanent (not temporary) facilities for the full 1962-63 academic year of 2 semesters or 3 quarters. Report the number of single students who will live in institutional housing and pay room charges. If your institution has a combined charge for room and board, please apportion the sum between Items C and D on a "best estimate" basis.

ITEM D – BOARD RATES: Report the charge for board paid by the typical student who has contracted to eat in institutional dining hall for the full 1962-63 academic year of 2 semesters or 3 quarters. Report the number of students who will pay scheduled board charges. If your institution has a combined charge for room and board, please apportion the sum between Items C and D on a "best estimate" basis.
